POLYBAG PRODUCTS **RETAIL PROGRAM**

RACK700
WITH HEADER STICKERS

GET NOTICED

Benefits of the retail program... We know you love our product, now let us help you display it. Now you can display all of your Install Bay polybag bulk products on custom, free-standing displays. These black, powder-coated metal racks look great in any environment. They are sturdy, but lightweight and easy to move around the retail area. The familiar Install Bay logo is placed on top with metal pegboard holes on the display section for easy placement of all bag sizes.

With two sizes available, these displays will meet your needs for offering a full range of Install Bay products. The smaller RACK700 is 20" wide by 72" tall with a display area of 20" x 49". The larger RACK750 is 40" wide by 78" tall with a display area of 40" x 59". Organized neatly in one spot, generating more sales with these everyday products is great for the bottom line!

MIX & MATCH

Make your own planogram...Have dedicated racks for specific part categories or mix it up. Now you can use these displays by themselves, use multiple racks in different areas around the store, or build a massive parts center with a large display in the center flanked by the smaller ones. Set up each rack as it's own category for easy product placement or build it over time starting with one rack - It's totally up to you!

SLATWALL WITH FOAMBOARD HEADER

RE-SEALABLE RETAIL POLYBAGS!

HOW IT WORKS

- Step 1:** Select the Install Bay rack size that works for your store.
- Step 2:** Order your desired Install Bay parts.
- Step 3:** Set it up & take a picture! Send it to your IB representative - we would love to see it!

Custom displays are more important than ever for today's retailers. Studies show that about 70% of all brand purchase decisions are made in-store and that in-store sales have increased as much as 65% when custom display materials are used. The study also compared sales of one brand that consistently uses stock materials to another that uses custom displays. The custom display delivered a 28% sales lift while the standard materials generated only 13% - a 2:1 advantage!

INSTANT CURE GLUE + ACCELERATORS

INSTANT CURE GLUE

MAXI-CURE1 10Z.

MAXI-CURE2 20Z.

MAXI-CURE™ bonds fiberglass, hardwood, metal and rubber better than any other hobby adhesive. For gluing to the inside, cloth textured surface of fiberglass, scrape the area to be bonded with a razor blade or coarse sandpaper before using MAXI-CURE™ or any other adhesive. It also is best for bonding the tires for R/C cars.

INSTANT CURE GLUE

INSTA-FLEX 1 OZ.

INSTA-FLEX™ flexible thin CA is ideal for many applications, including the installation of CA hinges. When cured INSTA-FLEX™ does not turn brittle and remains clear, even if accelerated with INSTA-SET™. It has superior shock resistance. INSTA-FLEX™ has also proven to be superior when bonding using anodized aluminum.

INSTANT CURE GLUE

INSTA-FLEX+ 1 OZ.

INSTA-FLEX+™ clear rubber toughened has similar Qualities to our black IC-2000™ but can be used in applications where you do not want the adhesive to be seen. The carbon components of IC-2000™ that gives the CA its black color also contributes to its unsurpassed strength. When aesthetics are important and a flexible bond is required, INSTA-FLEX+™ is your best choice. It forms superior bonds to soft urethane and vinyl plastics.

INSTANT CURE GLUE

IC-2000 10Z.

IC-2000™ is a rubber-toughened cyanoacrylate that forms superior shock resistant bonds on non-porous surfaces. The black colored CA has added flexibility for the bonding of metals, fiberglass, rubber, carbon fiber and other materials.

INSTANT CURE GLUE

IC-GEL .7 OZ.

IC-GEL™ is a cyanoacrylate paste that is extremely thick which comes in an applicator tube like toothpaste. It has the same bonding and curing time characteristics as MAXI-CURE™; IC-GEL™, however, can be applied to a vertical surface and will stay in place. IC-GEL™ is excellent putty for plastic models. It will fill any void and can be formed to many shapes. Applying Insta-Set allows IC-GEL™ to be sanded or filed to final shape in less than 20 seconds.

INSTANT CURE GLUE

A higher viscosity CA for loose fitting joints in which the adhesive must bridge gaps. Normally, the thicker CA is applied to one surface and then the parts are held tightly together for about 5 to 15 seconds.

INSTAC INSTANT SET ACCELERATOR 2 OZ.

Accelerator for quick curing of cyanoacrylates results in fast drying times and strong bonds between materials and surfaces of all kinds.

UN-CURE™

INSTAUN 1 OZ.

Debonder will soften cured CA. If parts are bonded incorrectly or your fingers are stuck together, a few drops of UN-CURE™ will dissolve the CA in about a minute. Apply on bonded skin and roll apart fingers. Once unstuck, use acetone to clean off softened CA, then wash off with soap and water.

**QUICK-CURE**

QUICK-CURE 9 OZ.

Epoxy cures to a slightly flexible consistency. This lack of brittleness allows it to form a lasting bond in areas subjected to high vibration or stress. QUIK-CURE™ shouldn't be used in areas that are subject to long-term immersion in water; however, it works fine for the internal structure of wood framed boats. QUIK-CURE™ is our only epoxy on which you can apply polyester resins. It can be mixed with micro balloons to form a quick setting putty. Items bonded with QUIK-CURE™ can be handled after 15 minutes. Full strength is reached in 1 hour.

New design silicone with egg wave foam, which allows for no more trimming or cutting and better sealing for better sound. Patent pending, foldable speaker baffle is designed to improve the directional flow of sound waves and focus them into the cabin. It perfectly seals the speaker against the interior panel. It also offers waterproof protection for the speakers, and the foldable ring fits different depths.

(1) The rear foldable ring protects speaker and improves sound.

(2) Silicone material is soft to seal between speaker and door panel.

(3) Silicone material is durable for harsh environment.

(4) The egg wave foam behind speaker improves sound by preventing sound wave bounced back.

This Teflon coating allows the knife to slide across the adhesive side of the vinyl, giving you a clean and easy cut through the release liner. Use while film is on the vehicle, boat, etc. or while on the cutting table inside the shop. This knife works anywhere and is compatible with most adhesive types and all brands of pressure sensitive vinyls and release liners.

GTWCBLADE REPLACEMENT BLADES **10/PK**
FOR WRAP CUT KNIFE

APRON

GT176 WAIST APRON **EA**
Heavy duty waist apron for easy access to tools while on the job.

RED DOT KNIFE

GT027 NT PRO A-1 RED DOT KNIFE **EA**
Regarded by many installers as the finest professional knife available. The blade can be advanced in 1/2" segment increments for precision control. Right or left handed use.

KNIFELESS TAPE

GT2017 FINISH LINE KNIFELESS TAPE **EA**
1/8" X 50M (164')

The knifeless tape has a high strength filament that acts as the cutting device. The tape/filament is laid out on the vehicle and the bulk vinyl material is installed over the tape/filament. Then, the filament is pulled through the material leaving behind the desired design. The edge is clean and sharp just like a knife cut but without the risk of cutting the paint.

GLOVES

GTWG1 WRAP GLOVES **PAIR**
The vehicle wrap glove is sold in pairs and is a must have for anyone installing vinyl graphics and vehicle wraps. Installing with your bare hands can cause over stretching and puckering of the vinyl as well as potential damage from the transfer of oils on your skin. These lint free and durable Wrap Gloves reduce friction while handling the material and give you great results every time.

SOUND DAMPING

SOUND DAMPING

Ballistic is a proprietary butyl rubber composite with an aluminum constraining layer for vibration damping. Designed and engineered in the United States, Ballistic is extremely efficient at converting vibration to thermal energy. This unique formula allows the material to easily conform and adhere to sheet metal and most other hard surfaces.

SIZE MATTERS

Ballistic Sound Damping Material is thicker and has more mass per ft² than any other damping product available. Ballistic is up to 30% thicker than the other guy's stuff. And we all know, the thicker material and more mass per ft² the more effective the product will be at eliminating road noise and vibrations.

NO SMELL

Most sound damping materials smell like a road paving project! Ballistic is specifically designed to eliminate this odor problem without sacrificing effectiveness. Don't just take our word for it, pick up the other guy's stuff and take a big whiff.

STICK IT & FORGET IT

Ballistic's revolutionary adhesive - Perma-Stick makes it easy to apply Ballistic material to almost any surface. Humidity and temperature extremes can play havoc on inferior sound damping. Perma-Stick's chemical make up is designed specifically to work in the harsh automotive environment.

**HOW DOES BALLISTIC WORK?**

The image above represents a typical door speaker installed in your car. The road noise and vibrations cause the speaker to distort and alter your music. Once Ballistic is applied, the unwanted road noise and vibrations are converted into thermal energy. With Ballistic applied speakers are installed on a solid reinforced mounting surface. The result is speakers are able to perform as they were originally designed, so you experience more music and less noise.
